

Wire photo/card holder project sheet (star)

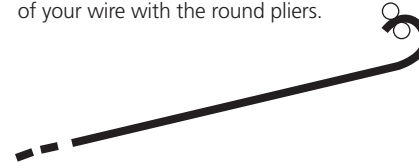

Begin by collecting tools and materials in your tray:

round pliers  wire cutters/flat pliers 

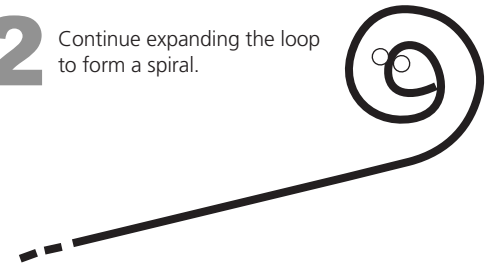

approx. 6' copper or aluminum wire 

1 glass gem or marble 

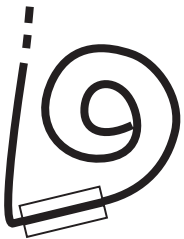

1 Begin by turning a loop at the end of your wire with the round pliers.

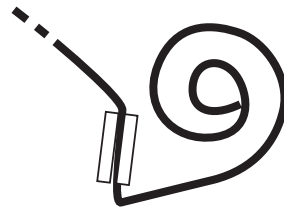

2 Continue expanding the loop to form a spiral.

3 Use the flat pliers to create a sharp bend in the wire and begin the star shape.

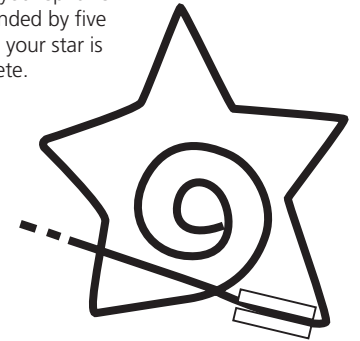

4 Continue making the sharp bends in alternating directions around the spiral.

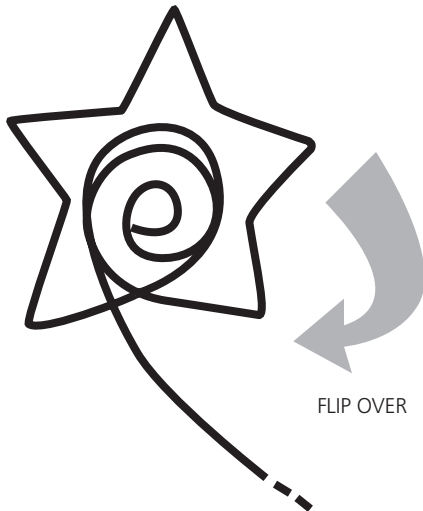

5 Use the width of the pliers to help you gauge where to make your next bend.

6 When your spiral is surrounded by five points, your star is complete.

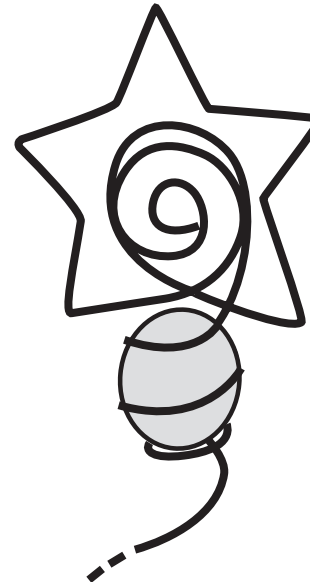

7 Using your thumb, create a loop behind your spiral. This will hold the card or photo.

8 Again, by wrapping your thumb, begin a spiral underneath the star for the marble or gem to sit in.

9 Insert the marble or gem and secure it by wrapping the wire around it several times.

10 At the base of the marble or gem, create a large spiral that will support the holder. Cut off excess wire.
